Workplace change: how to succeed

Around half of organisational interventions to enhance productivity and competitiveness or boost employees' health and well-being fail to achieve their intended outcomes. This is certainly disheartening, not least because we actually know a great deal about how to increase the chances of success.

In [January's Bulletin](#) work psychologist Dr Maria Karanika-Murray drew on evidence from research and practice to explain why organisational interventions fail so often.

In Part Two of her article Maria suggests possible approaches that can increase the chances of success.

Convergence! Improving productivity and quality of working together

Is quality of working life a luxury that only successful enterprises can afford? Or is it an enabler of business success?

Elise Ramstad's recent article in the **Nordic Journal of Working Life Studies** examined the effects on productivity and quality of working life of changes implemented at workplaces using the results of 163 development projects in Finnish enterprises.
